

THE BEST NATURAL PRESCRIPTION
FOR YOUR POOL

Excess Chemicals = Wasted Money

Traditional pool care can be wasteful: backwashing, constantly adjusting pH and alkalinity, shocking, etc. There's a better way.

Enzyme Cleaner

Active Rx Enzyme Cleaner is our flagship product. In commercial pools with heavy bather loads, managing non-living organic contamination can be a nightmare. Chlorine is not cut out for the job, yet it is left with the burden of having to oxidize the organic waste by itself. What are examples of non-living organic contamination? Bather waste, body oils, lotions, cosmetics, sunscreen, grease, hair gels, pet dander, spit, mucous, and of course, urine.

Phosphate Remover

The Active Rx Phosphate Remover is our professional-grade, concentrated phosphate remover. It is derived from rare earth elements. It is designed to react with phosphates on contact when poured in a swimming pool, and the reaction will make the water cloudy for about 24 hours. When the reaction is completed, the phosphates will have been crystallized and flocked out of solution. Vacuum the sediment to waste, and clean/backwash the filter for any remaining sediment. Removing phosphates from the pool has many benefits.

Metal and Scale Control

Active Rx Metal and Scale Control is designed to hold metals and minerals in solution (chelated). The result is prevention of metal stains in the pool, as well as calcium scale. Metal and Scale Control is most commonly used on new pool startups, as it gives about 60 days of protection while the plaster surface cures and hydrates. This product can also be used in pools to remove stains and scale, depending on the severity of the problem. If nothing else, it can help.

Clarifier + Enzyme

If you have cloudy pool water, or maybe pollen and oils on the surface of your pool, give Active Rx Clarifier+ Enzyme a try. It may not be strong enough to handle all the organic waste, because it wasn't designed to. It was designed to clarify. For heavy bather loads, you should be using Active Rx enzymes anyway. Clarifier+ Enzyme is primarily a lightly trafficked commercial pool product. It also works well in spas and hot tubs.
